ARCHITECTURE

MULTI-AGENT PIPELINE

SINGLE AGENT MODE

Task → Read → Plan → Execute → Verify

FEATURES

■ Agent Orchestration

Multi-agent pipeline with Researcher → Coder → Reviewer roles. Intelligent task decomposition and delegation.

■ Persistent Memory

Knowledge graph with 141 nodes and 142 edges, auto-extracted from codebase interactions and learned patterns.

■ Provider Independence

Seamless switching between Claude, GPT, Gemini, MiMo, and local Ollama models. No vendor lock-in.

■ Self-Improvement

The agent learns from its own verification results, improving code quality and test accuracy over time.

■ Cost Efficient

Runs on Xiaomi MiMo at 1/7 the cost of Claude Opus, making autonomous coding accessible to everyone.

■ AI-Built

Written entirely by AI agents — Claude, OpenCode, Pi, and Grok orchestrated together. A project by AI, for humans.

SUPPORTED AI MODELS

Provider	Model	Type	Cost Tier
Anthropic	Claude (Opus / Sonnet)	Cloud	\$\$\$\$\$
OpenAI	GPT-4o / GPT-4.1	Cloud	\$\$\$\$
Google	Gemini 2.5 Pro / Flash	Cloud	\$\$\$
Xiaomi	MiMo v2.5 (Free tier)	Cloud	\$
Ollama	Llama / Qwen / Local	Local	Free

BUILT BY AI AGENTS

Her Rubyness was written entirely by a team of AI agents working in concert:

- ◆ **Claude** — Architecture design, core logic, test strategy
- ◆ **OpenCode** — Code generation, refactoring, debugging
- ◆ **Pi** — Knowledge graph construction, documentation
- ◆ **Grok** — Orchestration patterns, provider integration
