

Her Rubyness

I don't try. I verify.

An AI Coding Agent — Built Entirely by AI Agents

TypeScript • MIT License • Open Source

THE PROBLEM

AI Coding Is Broken

\$

Expensive

Claude Opus costs \$15/M
input tokens
for every single coding task

?

Inconsistent

Same prompt, different
results.
No verification, no
guarantees.

!

Siloed

One model can't see the
whole picture.
No memory across sessions.

THE SOLUTION

Her Rubyness

I don't try. I verify.

Multi-Model Support

Claude, GPT, Gemini,
MiMo, Ollama

Knowledge Graph

141 nodes, 142 edges
of contextual memory

Multi-Agent Architecture

Researcher, Coder,
Reviewer work together

87% Code Coverage

566 tests passing.

7× Cheaper Than Opus

MiMo delivers premium

Built by AI Agents

The ultimate proof:

ARCHITECTURE

How It's Built

MULTI-AGENT PIPELINE

FEATURES

Built for Developers

Knowledge Graph Memory

Contextual understanding of your entire codebase. 141 interconnected nodes remember everything.

Multi-Model Flexibility

Switch between Claude, GPT, Gemini, MiMo, or Ollama. Use the right model for each task.

Verification-First

566 tests and 87% coverage aren't just numbers — they're the philosophy. Verify, then trust.

Agent Orchestration

Research, code, review — specialized agents collaborate like a senior engineering team.

Cost Intelligence

MiMo delivers 1/7 the cost of Claude Opus without

Open & Extensible

MIT licensed. TypeScript. Community-driven. Fork it

SUPPORTED MODELS

Your Model, Your Rules

Claude

Anthropic

Best reasoning &
code quality

Premium

GPT-4

OpenAI

Broad capability &
ecosystem

Premium

Gemini

Google

Multimodal & fast
inference

Premium

MiMo

Xiaomi

1/7 cost of Opus,
great for code

Best Value

Ollama

Local

Run fully offline, zero
cost

Free

BY THE NUMBERS

Quality You Can Measure

566

Tests Passing

Automated & verified

87%

Code Coverage

Thorough by design

141

KG Nodes

Knowledge graph entities

142

KG Edges

Relationships mapped

TEST COVERAGE BREAKDOWN

Unit Tests

92%

HOW IT WORKS

From Prompt to Verified Code

01

You Ask

Natural language request through the CLI interface

02

Route

Router selects optimal model based on task complexity

03

Research

Researcher agent scans your codebase & knowledge graph

04

Code

Coder agent generates changes with full context awareness

05

Review

Reviewer agent validates, runs tests, verifies quality

06

Deliver

Verified, tested code ready for your approval
